

Industrial Line

Inibitor 202

Technical data sheet
n° 894 Rev. 31/01/2018

Boiler Water Dispersant

Category:

- Products for water treatment

Applications:

- Dispersant

Advantages:

- Concentrated product

Applications

Inibitor 202 is a liquid conditioning agent with high dispersing properties against calcium and magnesium salts for demineralised, softened and also osmotic waters.

The use of Inibitor 202 makes it possible to act as a buffer in any malfunctions in the treatment plants, with a consequent reduction in the risk of dirtying the surfaces affected by the heat exchange.

Method of Use

Inibitor 202 can be supplied both as such and diluted in all proportions with water. For best results, continuous dosing is recommended proportionally to the amount of feed water.

The dosage must be agreed with the Chemical Roadmaster Technical Service based on the characteristics of the water and the system. The average dosage, however, can be considered indicatively oscillating between 20 and 30 ppm in the feed water, equal to 20-30 gr per 1000 litres of conditioned water.

Technical features

pH	Not defined
Odour	Odourless
Colour	Colourless
Density (20°C)	1.05 g/cm ³

Product for industrial/professional use. The manufacturer declines all responsibility for any damage caused by an improper use of the product.
