

# ROAD BRILL

Technical data sheet n° 229 Rev. 28/04/2014

Self-polishing detergent for vehicles bodywork and tarpaulins

## APPLICATIONS:

Road Brill is a product for the cleaning and treatment of vehicles bodywork and tarpaulins. Road Brill thoroughly washes the surfaces and spreads on them a particular substance with a water-repellent effect.

After using Road Brill, the water is repelled, draining as water drops and avoiding the formation of streaks and spots due to detergent residues and limescale.

On the bodywork, the effect is long lasting and even more on the rubberized canvasses, where it penetrates and protects deeply. Road Brill is also suitable for cleaning tarpaulins and hoods and for many plastic and resin surfaces.

## METHOD OF USE:

Dilute the product in a quantity of 10 ml in a litre of water (a small cup of coffee in 5 litres of water). Wash the vehicle with a sponge or a synthetic cloth, then rinse thoroughly.

Immediately you will see the draining effect of the water drops. It does not contain silicones. **Advantages:** Highly concentrated.

## FIELDS OF APPLICATION:

It can be used in many activities such as:

- Bodywork shops
- Car repair
- Car dealers
- Domestic use
- Special applications
- Trucking companies
- Bus operators
- Local transport companies
