

PARQUELUX

Technical data sheet n° 612 Rev. 16/02/2018

Self-shining protective wax for parquet floors. Anti-slip with mirror-like effect

APPLICATIONS:

ParqueLux is a polishing and protective wax with high resistance to footfall for parquet and glossy lacquered wooden floors. ParqueLux eliminates scratches, opacities and signs of wear from the parquet and makes it shiny with a mirror-like effect. The presence of an anti-slip additive allows it to be used in complete safety.

Once dry, a homogeneous and bright film is formed on the parquet that does not require further polishing. Moreover, ParqueLux leaves a pleasant scent that persists for a long time.

METHOD OF USE:

Before applying ParqueLux, the floor must be carefully washed with ParqueSan detergent, dry and free from any non-specific wax treatments, otherwise the brilliance will be quite poor. If necessary, use the dewaxing product Decer Queen.

The ParqueSan neutral product is also recommended for waxy film maintenance (the common wash & wax products are not recommended).

Yield: The recommended dose of ParqueLux is 25 ml per m² of surface to be treated (about a half a small cup of coffee).

Dilutions: For a deep waxing, apply the product as it is, using a damp and clean cloth, spreading it homogeneously, first horizontally and then vertically.

FIELDS OF APPLICATION:

- Communities
- Hotel sector
- Restaurant sector
- Domestic use
- Cleaning companies
