

SOLVE COL SPRAY

Technical data sheet n° 544 Rev. 28/04/2014

Removes glues from glasses, ceramics, wood and metals

APPLICATIONS:

Solve Col Spray is a solvent able to remove completely the residues of glues from glasses, ceramics, wood and metals. The product is very useful and very effective when the removal of glues residues is difficult, objects are difficult to reach or in case of surfaces difficult to clean. Solve Col Spray does not attack metals, wood and industrial plastics. If the glue to remove is on delicate surfaces (carpets, tissues, plastics, varnished surfaces, etc.) is recommended to carry out a preliminary test in order to avoid possible damages. It is excellent on aluminum and its alloys. It does not contain acid or alkaline compounds, as well as methylene chloride, trichloroethylene and aromatic solvents. Being thixotropic it adheres to surfaces without leakage. It can be easily removed with water at room temperature.

METHOD OF USE:

Spray homogeneously and abundantly on the surfaces to be treated from a distance of about 15-20 cm. and let it work for a few minutes. Remove the residues with a cloth or a spatula. In case of incomplete removal of the residues, repeat the operation.

CATEGORY:

- Spray glues remover

ADVANTAGES:

- Effectiveness
- Practical use with spray
