Alcoholic sanitizer for clothing

Applications

Sanitizing spray for clothing in general, both classic and sports, in natural or synthetic material. Thanks to its high alcohol content, it thoroughly sanitizes the garment, removing at the same time the sources of foul smelling and leaving a pleasant sensation of fresh and clean. Can also be used on composite clothing with leather, metal or rubber inserts. Test the product on a small surface to check compatibility with the material to be treated.

Use mode

Shake the can well and spray the product on the garment from a distance of about 20 cm. Wait 5/10 minutes before putting the garment back on.
