Product for professional use. We decline all responsibility for the improper use of the product.

Anti-odor alcoholic sanitizer for cars, in disposable spray with total emptying (ONE SHOT)

Applications

Depur Car is a disposable spray with total automatic emptying (One Shot), capable of sanitizing and eliminating odors present in vehicles and leaving you with an intense and pleasant fragrance.

Thanks to its high alcohol content (> 70% net of propellants), it sanitizes thoroughly even in the most difficult to reach corners, such as air conditioning systems. After application, it evaporates completely and therefore does not stain and leaves no traces or marks on any type of surface. Safe to use, it does not contain harmful and irritating products, heavy hydrocarbons or aromatic or chlorinated solvents.

Application fields

Depur Car is excellent for sanitizing and deodorizing campers, caravans, buses, cars, ambulances, vans, commercial vehicles in general, saturating the environment and sanitizing it.

One can is sufficient to treat volumes up to 80-120 m³.

Use mode

After closing car doors and windows, shake the can and press the dispenser button. Place the can on the footrest platform being careful not to direct the jet towards the seats and the dashboard. Product delivery continues for 3/4 minutes, producing a very fine aerosol capable of saturating the passenger compartment.

Wait at least twenty minutes before returning, to allow time, for the product to act and then air thoroughly before using the treated vehicle. For the sanitization of air conditioning systems and filters, keep ventilation on during delivery.
